SAR System

DEFENSE · AEROSPACE · COMPLEX SYSTEMS

Vertical AI for systems engineering

An AI built for systems engineering only, that multiplies the capacity of the engineers you already have. The AI does the long, repetitive work. Your engineers keep the decision.

THE PROBLEM

Shortage
of skilled systems engineers in defense

40–56%
of defects are born in the requirements

1 day
a week lost searching for information

42%
of critical know-how lives in one head

Sources: Boehm & Martin · McKinsey · Panopto

AVAILABLE TODAY · SPECIFICATION REVIEW AND TRACEABILITY

Requirements
Extracted, deduplicated and traced to their source clause.

Standards
Applicable standards broken down, each with its exact source citation.

Conflicts
Contradictions flagged at programme start, before they reach design.

Traceability
Every change recorded: who, when, and its impact on conflicts.

Next: the full systems-engineering chain, module by module.

THE DIFFERENCE

TODAY

Found months later
Conflicts surface at integration, as costly rework.

WITH SAR SYSTEM

Found on day one
Conflicts are flagged at analysis, with the evidence attached.

WHAT CHANGES FOR YOUR TEAMS

Know-how retained
Rules, standards and past programmes stay in the company.

More bids, same team
Answer more tenders, without new hires.

No migration
SAR exports to your tools' formats, such as ReqIF.

Modular
Start with one module. Add the others when you are ready.

DEPLOYED IN YOUR ENVIRONMENT

Air-gapped · On your servers · SaaS for civil projects · in development · **ISO 27001 compliant**

See SAR System on your own specification.
