SAR SYSTEM

The AI built for systems engineering

Every engineer becomes an augmented systems engineer.

Léa-Jane Krief, CEO · Sharon Zerbib, CTO

Your engineers are stretched to breaking point

Shortage

of skilled systems engineers in defense

40–56%

of defects are born in the requirements

1 day

a week lost searching for information

42%

of critical know-how lives in one head

Sources: Boehm & Martin · McKinsey · Panopto

Errors found late cost a fortune

€1M+

burned per large program before client validation even starts

×78

the cost of a requirement error caught at integration (NASA)

Months

of upstream work redone by hand, program after program

An AI that reasons like a systems engineer

Thinks like an expert

Hundreds of pages in, clean requirements out — contradictions flagged.

Lives in your tools

No new software to adopt. Your engineers keep working the way they do.

Never forgets

Every decision, every lesson kept. Your expertise never walks out the door.

The augmented engineer: SAR proposes → the engineer decides

Your AI co-pilot for systems engineering

SAR works alongside your engineers and automates the systems engineering chain, step by step — powered by your own internal data.

Deploy your way: Air-gapped, on your servers · SaaS in development

Established industry leaders

- Turn decades of programs into an edge
- Keep know-how when experts retire
- Answer more bids, same team

Emerging & growing companies

- Prime-grade engineering from day one
- Scale without a large SE team
- Win and deliver contracts faster

Conflicts caught before they cost millions

TODAY

Months later

found at integration, as costly rework

WITH SAR

Minutes

found on day one, with the proof attached

Proof, not opinion — every conflict comes with its evidence.

One engine, from SaaS to classified

Air-gapped

Fully offline, for classified programs.

On your servers

Your data, your hardware.

SaaS platform

In development, for civil projects.

Same engine, same modules: you choose where it runs.

More programs. Same team.

Weeks not months, on upstream engineering

+ Bids answered without a single new hire

0 migration — keep your tools

100% of your know-how kept in-house

Domain depth meets AI horsepower
